

Attachment #4.1 Return to Agenda

November 3rd, 2021 ICS Meeting #253

Prepared for: November 10th, 2021 EC Meeting
Prepared by: Brian Shanahan, ICS Chairperson

4.1.1 2022 IRM Parametric Results – Attachment #4.1.1 – For EC Approval

4.1.2 2022 IRM Tan 45 Results – Attachment #4.1.2 – For EC Approval

4.1.3 First Draft 2022 IRM Technical Report - Attachment #4.1.3- For EC Review & Comment

Comments received to date from ICS members & participants are contained in the attached first Draft IRM Report. 2022 Final Base Case IRM was determined to be 19.1% as discussed in the IRM Technical Report.

4.1.4 First Draft 2021 IRM Report Appendices – Attachment #4.1.4 – for EC Review & Comment

Comments received to date from ICS members & participants are contained in the attached first Draft IRM Report Appendices. The mid November ICS meeting will incorporate further comments and reviews as part of the Agenda.

4.1.5 Special Sensitivity Case – None selected for 2022 IRM.

- There will be a presentation of the Final Base Case ELR Sensitivity Using GE MARS at the November 17th ICS meeting.
- Work will continue on the evaluation of Y49/Y50 cable outage rates and is expected to be available after the Final IRM report work is complete.
- At the October 2021 EC meeting, there was an action for ICS / NYISO to consider adjusting the sequence of select EOP calls in order to investigate the effect these would have on reducing the number of EOP calls produced by the MARS model. After discussion with NYISO, and at the November ICS meeting, due to the complexity and time remaining until completion of final IRM work, as well as the need to perform a proper analysis of any change results, this effort will need to continue until after Final IRM approval in 2021 and is being tracked via ICS Action Item 253-1.
