Item	Information ◀	Formatted Tabl
1. PRR No. & Title of Reliability Rule or	PRR-###-144 C.3: Outage Coordination - Requirement 4 and Requirement 6	
2. Rule Change Requester		
Name	James Grant	_
Organization	NYISO	
3. New rule or revision to existing rule?	Existing	
4. Need for rule change, including advantages and disadvantages	The intent of existing R4 is for scheduled maintenance outage of facilities to be completed expeditiously in the event of an emergency. However, the NYISO cannot attest as to whether control a facility owner has acted expeditiously in restoring an outage. The intent of existing R4 will be incorporated into the procedures stipulated in existing R6 of this Rule, so that facility owner are aware of their obligation to restore maintenance outages expeditiously in the case of an emergency. Existing R4 will be retired, and subsequent Requirements will be renumbered.	П

7. Section B – Requirement		

## Appropriate adjustments shall be made to NYCA operations to accommodate the impact of protection group outages. ## ASR4.1. For typical periods of forced or maintenance outage of a protection group, it can be assumed, unless there are indications to the contrary, that the remaining protection will function as designed. ## ASR4.2 If the protection group will be out of service for an extended period of time (as defined in NPCC criteria), additional adjustments to operations may be appropriate considering other system conditions and the consequences of possible failure of a remaining protection group. ## ASR5. The NYISO shall maintain procedures and systems which ensure that outages of transmission facilities are coordinated in such a manner to ensure reliability. The procedures shall include a requirement that Transmission. Owners expedite, to the extent practicable, maintenance of facilities which impact the reliability of the power system. The NYISO must notify the NYSRC of any changes to these procedures and systems which ensure that outages of transmission facilities are coordinated in such a manner to ensure reliability. The procedures shall include a requirement that Transmission Owners expedite, to the extent practicable, maintenance of facilities which impact the reliability of the power system. The Transmission. Owner must notify the NYISO of any changes to these procedures. ## Section C - Compliance ## M1. The NYISO maintained transmission outage coordination procedures and systems which ensure that outages of transmission outage coordination procedures and systems which ensure that outages of transmission outage coordination procedures and systems which ensure that outages of transmission outage coordination procedures and systems which ensure that outages of transmission outage coordination procedures and systems which ensure that outages of transmission outage coordination procedures and systems which ensure that outages of transmission outage coordination procedures and systems which ensure	Requirements	R4.
