Subject: PRR 151
Date: Friday, April 14, 2023 11:30:47 AM

I am writing this email to provide comments to the New York State Reliability Committee – Executive Committee (“NYSRCEC”) efforts to comply with “PRR 151- Establish Minimum Interconnection Standards for Large Facilities Inverter Based Resources (IBR) based on IEEE Standard 2800-2022”. I am requesting clarity with regards to proposed applicability of this PRR 151 as it relates to (i) Existing system (e.g. the Chateauguay “back-to-back” converter/inverter) and/or (ii) New, large scale Inverter and/or (iii) any Existing system commonly referred to as DC Lite system, and/or (iv) any new system commonly referred to as DC Lite system.

Sincerely,

Scott Leuthauser
