Request to Develop or Modify Reliability Rules and Requirements (NYSRC Policy No. 1-11) Submit request to Herb Schrayshuen (herb@poweradvisorsllc.com) via the NYSRC site www.nysrc.org

Transmission facilities in the NYS Bulk Power System shall be planned to meet respective performance requirements in Table B-1 and supplemental perform requirements in Table B-1 for the contingency events as specified in Table B-1. 4. Need for rule change, including advantages and disadvantages Sudden loss of fuel delivery system to multiple plants is currently included as a Extreme Contingency in NYSRC Reliability Rules Table B-3, (Extreme contingency in NYSRC Reliability Rules Table B-3, (Extreme contingency in NYSRC Reliability Rules Table B-3, (Extreme contingency in Table B-3 (sudden loss of a fuel delivery system. Extreme contingency 10 in Table B-3 (sudden loss of a fuel delivery system to multiple plants) would also be revised to clarify applicability to fossil-based generation. It is proposed to make these design criteria contingencies in Table 1, Category I and Category II contingencies. The proposed contingency for the loss of fossil fuel to a plant for a common-magniture of the fuel delivery system better aligns to risks to operations present of the system today. There are no disadvantages. 5. Related NYSRC rules B.1 - Transmission System Planning Performance Requirements 6. Section A - Reliability Rule Elements Table B-1: Category I Event - add new contingency 10, sudden loss of gas fuel single plant for a common-mode failure of the fuel delivery system. Add category II event 1 for sudden loss of gas fuel to a single plant for a common-mode failure of the fuel delivery system.	Item	Information

Organization Revision to B.1 - Transmission System Planning Performance Requirements, RI Transmission facilities in the NYS Bulk Power System shall be planned to meet respective performance requirements in Table B-1 and supplemental perform requirements in Table B-1 and supplemental perform requirements in Table B-1 and supplemental perform requirements in Table B-2 for the contingency events as specified in Table B-1 4. Need for rule change, including advantages and disadvantages Sudden loss of fuel delivery system to multiple plants is currently included as a Extreme Contingency in NYSRC Reliability Rules Table B-3, (Extreme contingency 10). This rule is proposing to add design criteria contingencies of the loss of guel to a single plant for a common-mode failure of the fuel delivery system. Extreme contingency 10 in Table B-3 (sudden loss of a fuel delivery system to multiple plants) would also be revised to clarify applicability to fossil-based generation. It is proposed to make these design criteria contingencies in Table 1, Category I and Category II contingencies. The proposed contingency for the loss of fossil fuel to a plant for a common-mode failure of the fuel delivery system better aligns to risks to operations present of the system today. There are no disadvantages. 5. Related NYSRC rules B.1 - Transmission System Planning Performance Requirements 6. Section A – Reliability Rule Elements 1. Reliability Rule Table B-1: Category I Event – add new contingency 10, sudden loss of gas fuel single plant for a common-mode failure of the fuel delivery system. Add category II event 1 for sudden loss of gas fuel to a single plant for a common-mode failure of the fuel delivery system.					
3. New rule or revision to existing rule? Revision to B.1 - Transmission System Planning Performance Requirements, R1 Transmission facilities in the NYS Bulk Power System shall be planned to meet respective performance requirements in Table B-1 and supplemental performs requirements in Table B-1 and supplemental performs requirements in Table B-1 and supplemental performs requirements in Table B-2 for the contingency events as specified in Table B-1. 4. Need for rule change, including advantages and disadvantages Sudden loss of fuel delivery system to multiple plants is currently included as a Extreme Contingency in NYSRC Reliability, Rules Table B-3, (Extreme contingency 10). This rule is proposing to add design criteria contingencies of the loss of guel to a single plant for a common-mode failure of the fuel delivery system. Extreme contingency 10 in Table B-3 (sudden loss of a fuel delivery system to multiple plants) would also be revised to clarify applicability to fossil-based generation. It is proposed to make these design criteria contingencies in Table 1, Category I and Category II contingencies. The proposed contingency for the loss of fossil fuel to a plant for a common-mode failure of the fuel delivery system better aligns to risks to operations present of the system today. There are no disadvantages. 5. Related NYSRC rules B.1 - Transmission System Planning Performance Requirements 6. Section A - Reliability Rule Elements Table B-1: Category I Event - add new contingency 10, sudden loss of gas fuel single plant for a common-mode failure of the fuel delivery system. Add categ II event 1f of sudden loss of gas fuel to a single plant for a common-mode failure of the fuel delivery system.	Name	RRS			
Transmission facilities in the NYS Bulk Power System shall be planned to meet respective performance requirements in Table B-1 and supplemental performs requirements in Table B-2 for the contingency events as specified in Table B-1. 4. Need for rule change, including advantages and disadvantages Sudden loss of fuel delivery system to multiple plants is currently included as a Extreme Contingency in NYSRC Reliability Rules Table B-3, (Extreme contingency in NYSRC Reliability Rules Table B-3, (Extreme contingency in NYSRC Reliability Rules Table B-3, (Extreme contingency 10). This rule is proposing to add design criteria contingencies of the loss of go fuel to a single plant for a common-mode failure of the fuel delivery system to multiple plants) would also be revised to clarify applicability to fossil-based generation. It is proposed to make these design criteria contingencies in Table 1, Category I and Category II contingencies. The proposed contingency for the loss of fossil fuel to a plant for a common-mode failure of the fuel delivery system better aligns to risks to operations present of the system today. There are no disadvantages. 5. Related NYSRC rules B.1 - Transmission System Planning Performance Requirements 6.
