**For the 2026-2027 Capability Year NYISO introduced the concept of Triggering Resources as shown on the next page. The listed LCRs for 2026-2027 above correspond to the “CHPE-in” LCRs aligning with assumptions for the Special Sensitivity Case adopted as the Final Base Case by the Executive Committee on December 5, 2025.

Triggering Resource Impact on 2026-2027:

Triggering Resource Operating Status Assumption	IRM	J LCR	K LCR	G-J LCR
CHPE-In	24.5%	86.4%	110.3%	82.5%
CHPE-Out	24.5%	82.6%	110.3%	82.5%

Consistent with the “triggering resource” rules that became effective on December 24, 2025, when a Triggering Resource exists for the upcoming Capability Year, the NYISO develops two sets of LCRs: one set assuming the Triggering Resource is participating in the capacity market (“resource-in”) and a second set assuming the Triggering Resource is not participating in the capacity market (“resource-out”). For the 2026–2027 Capability Year, the Unforced Capacity Deliverability Rights (UDRs) awarded to the Champlain Hudson Power Express (CHPE) project qualify as a Triggering Resource. Accordingly, the NYISO determined two sets of LCRs representing the different potential operating assumptions for CPHE (i.e., “CHPE-In” and “CHPE-Out”).¹
